SUMMARY

Technical seller with a CS degree who ships production software. Carry a **~$2M, 31-account** industrial automation book (Eplan +30% YoY; one account $10.4K → $225K+). As a founder, built a 217-route connected-machine platform for a manufacturer and MetrIQs, an analytics platform with 9 integrations and an MCP server.

EXPERIENCE

Electro-Matic · Account Manager — May 2024 – Present
Industrial automation distributor and integrator selling to OEMs and machine builders — Farmington Hills, MI

- Manage a **~$2M, 31-account B2B book**, from job shops to large OEMs such as Fori Automation.
- Own engineering-software sales company-wide across 5 territories (SE & West Michigan, Ohio, Memphis, Florida); grew **Eplan 30% YoY ($130K → $170K)** and sell Siemens simulation software.
- Grew one account **21x, $10.4K (2025) → $225K+ (through Sep 2026)**, via discovery and new applications.
- Run technical discovery with controls engineers and integrators to scope **control panels, robotics, and injection-molding machine integrations**, then turn requirements into proposals and quotes.
- Built web configurators that encode PDU and RPP rules and output drawings, BOMs, and quotes.

Pixelate Solutions LLC · Founder & Software Engineer — Aug 2024 – Present
Software consultancy for manufacturing, municipal, and SMB clients, plus the MetrIQs product — Remote

- Own each engagement end to end: discovery, scoping, proposal, build, deployment, and support.

MetrIQs · in-house product: profit analytics for restaurants

- Shipped an **MCP server (22 tools, OAuth via Clerk)** so customers' own Claude, ChatGPT, or Cursor can query their data, run leak analyses, and set alerts; deterministic code does all the math.
- Wrote **9 native integrations**, incl. Toast, Shopify, QuickBooks, Plaid, and Stripe (OAuth, webhooks).
- Built a branded one-page **Profit Leak Report** from 36 months of data; it opens MetrIQs sales calls.

Connected-machine platform · client: industrial laser-marking machine manufacturer

- Built and shipped the client's platform: Expo iOS/Android app, **217-route Node/Express API**, and Next.js admin on Supabase Postgres (~130k LOC, 370 commits in 4 months).
- Built an **AI support agent** that answers from manuals and past tickets and auto-triages new ones.
- Re-architected live telemetry after a **3.7M-row** incident: idempotent ingest, 10 Hz realtime caps.

Ally Financial · Mobile Software Development Engineer Intern — Detroit, MI | May 2023 – Aug 2023

- Built Ally Mobile UI in SwiftUI, React Native, and Jetpack Compose; presented research to executives.

SELECTED PROJECTS

- **Link**: Plaid finance app with rules-first LLM categorization, a REST API, and an MCP server.
- **Northstar**: Live AI trip planner: tool-calling edits with undo; Next.js web plus a native SwiftUI app.
- **civic-records-ai**: Offline municipal records Q&A with page-level citations (FastAPI, ChromaDB, Ollama).

SKILLS

Pre-sales: Discovery, demos & POCs, solution design, proposals & quoting, objection handling
Build: TypeScript, Python, SQL, Next.js, React, Node.js (Hono, Express), FastAPI, Expo, PostgreSQL
AI & APIs: OpenAI & Claude APIs, MCP, RAG, evals; REST, webhooks, OAuth; Plaid, Stripe, Shopify
Cloud & tools: GitHub Actions, Docker, AWS, GCP, Vercel, Render, Playwright, Power Automate, Power BI

EDUCATION

Michigan State University · B.S. Computer Science, Minor in Business — East Lansing, MI | Jun 2024
